

What is claimed is:

1. An apparatus for launching streamers into the air by a user comprising:

(a) at least one streamer; and

(b) attachment means for attaching said streamer to the hand of the user.

2. The apparatus of Claim 1 wherein said attachment means includes a ring member of a size and shape such as to receive a finger of the user.

3. The apparatus of Claim 2 wherein said means for attaching said streamer to the hand of the user comprise a launch strip, and means connecting one end of said streamer to said launch strip.

4. The apparatus of Claim 1 wherein said at least one streamer comprises one of a plurality of streamers.

5. The apparatus of Claim 1 wherein said at least one streamer comprises one of a row of streamers, and including at least one additional row of streamers.

6. The apparatus of Claim 3 wherein said launch strip is composed of plastic film.

7. The apparatus of Claim 3 wherein said launch strip is composed of paper or tissue paper.

8. The apparatus of Claim 2 wherein said ring member is composed of a resilient member.

9. The apparatus of Claim 1 including means for retaining said streamers and said attachment means together prior to use of said apparatus.

10. The apparatus of Claim 1 wherein said launching strip includes wind means for enclosing said at least one streamer prior to launch of the streamer.

11. The apparatus of Claim 10 wherein said wing means are a separate element secured to one surface of said launch strip.

12. The apparatus of Claim 10 wherein said launch strip and said wing means are one, integral element and have longitudinal lengths, and said lengths extend at 90° relative to each other.

13. An apparatus for use as a pom-pom comprising:

- (a) a launch strip;
- (b) means connected to said launch strip for attaching said launch strip to the hand of the user; and
- (c) a plurality of streamers attached to said launch strip.

14. The apparatus of Claim 9 wherein said streamers have lengths in the order of 6 inches to 3 feet.
